-

Projects

ERP System

- Systems used to plan and manage all the core processes of an organization, including supply chain, manufacturing, ordering, dispatching, billing, finance, and more, are designed to streamline operations and ensure seamless integration across various departments.

Fleet Management System

- A **Fleet Management System (FMS)** is used to track and manage a fleet of vehicles. It helps with vehicle tracking, maintenance scheduling, fuel management, driver behavior monitoring, and route optimization.

Retail POS

- The system enables sales representatives to swiftly and seamlessly process transactions by scanning barcodes, applying discounts, and accepting a variety of payment methods, including cash and cards payments.

Togethring Web App

- An application designed for sharing entertainment experiences with friends and family, allowing users to watch shows and media together on the same screen. It enables seamless control by any connected user.

iRAINS

- **iRains** is a weather information system that provides real-time rainfall data, forecasts, and historical records across India. It helps with agricultural planning, water management, and disaster preparedness through interactive maps and charts.

Buchheit

- An **eCommerce website** is an online platform where businesses sell products. Key features include a product catalog, shopping cart, secure checkout, payment integration, customer accounts, search functionality. It allows customers to browse, purchase, and receive items while businesses manage orders and inventory.
